

ENVIROFILL BENEFITS

ENVIROFILL APPLICATIONS

	Performance	Microban Technology	Color	Consistency	Prop 65
Putting Greens	<ul style="list-style-type: none"> Envirofill is highly rounded, which allows for easy installation in dense turf. Because its round, it resists compaction, keeping green speeds constant over time. 	<ul style="list-style-type: none"> Putting greens are often times in shady, wet environments which can harbor bacteria, resulting in mold and mildew. Microban-infused Envirofill fights against the growth of bacteria, mold, and mildew, keeping your green looking pristine. 	<ul style="list-style-type: none"> Black and Green Envirofill provides a natural look, the perfect finishing touch. Envirofill's acrylic coating is very durable and comes with an industry leading 16-year warranty. 	<ul style="list-style-type: none"> When selling nationally, consistency is crucial. You want your customer to have the same experience regardless of location. Since Envirofill is consistent in performance, aesthetics, and reliability, it will alleviate any worry about how systems will perform across different locations. 	<ul style="list-style-type: none"> In California, silica dust is lumped into a category of carcinogenic products that can cause health issues from over exposure. While Envirofill's core is silica, the patented, acrylic coating eliminates all dust. It has been independently reviewed and tested by Duke University, an expert in Prop 65, and determined to be exempt from any Prop 65 warnings.
Pets	<ul style="list-style-type: none"> Because of its smooth, round coating, Envirofill is very easy to install in dense landscape turf. The round shape is easy on turf fibers, and does not accelerate fiber breakdown. It's especially good for high traffic areas such as swings and slides. Envirofill has provided very favorable HIC ratings when paired with a playground pad. 	<ul style="list-style-type: none"> When a dog expels urea in the form of urine, bacteria begins to break down the urea into Ammonia and CO2, resulting in a strong ammonia odor. Microban infused Envirofill fights against this process and reduces the ammonia smell by 99%. No special maintenance is necessary. The Microban protection is part of the coating and works 24/7. 	<ul style="list-style-type: none"> Envirofill has the most durable coating on the market. Having been around since 2005, Envirofill has been proven it can withstand significant use. Envirofill has been put through accelerated weathering tests, showing it can withstand significant weather and moisture changes. Inferior coated sands are not as stable against water, resulting in colors fading and tracking onto shoes and paws. The green color blends in with the turf, rendering it out of sight and out of mind. 		
Lawns		<ul style="list-style-type: none"> Microban-infused Envirofill gives facility owners the peace of mind that their synthetic playground surfaces will stay clean and safe.
